CAREER TIPS

Research Careers

Scope of a Career in Research

A career in research can take you to different areas of employment. Given below are the sectors that have researchers:

- Educational Institutions
- Government Institutions
- Industrial Laboratories
- Corporate Institutions
- Hospitals
- Insurance Companies
- Private Companies and Industries

Jobs

Researchers utilize their specialized skills to dig deep in search of information and use them to further solve complex problems.

- **Actuary:** An actuary's job responsibility is to analyze, calculate and predict the financial cost of risk. Here the person has to use their research, analytics and problem-solving skills along with excellent mathematical skills to reach onto a conclusion. Usually, the demand for actuaries in insurance companies or large corporations.
- **Market Research Analyst:** In this job position, the person has to assess the market conditions to determine the suitability of a product and services for the customer. Candidates study the consumer behaviours and analyse the financial information of companies with the use of primary and secondary research.
- **Medical Research Scientist:** The job role of Medical Research Scientist is to develop a medicinal cure for diseases. Their responsibilities include plan, conduct, record and interpret the experiments carried and derive a suitable solution. They work in a hospital, research institutions, industries or government laboratories.
- **Biological or Life Science Researchers:** A Life Science Researcher study problems related to living organisms. The research is conducted to explore living cycles of organisms or to find a solution regarding problems faced by them. This career in research will land you at government agencies.
- **Research Psychologist:** A career in Research with psychology as the area of specialization, includes the study of animals, humans and their behaviours. These individuals work at universities, schools and health sectors.

Salary Outlook

It is quite difficult to estimate the salary of persons who are to make a career in research due to the involvement of various parameters. The salary of the researcher depends on:

- ✓ Type of job position
- ✓ Industry in which job position held
- ✓ Location of the job
- ✓ Required experience for the job
- ✓ Required skill sets
- ✓ Level of education and several other factors

What kind of jobs involves research?

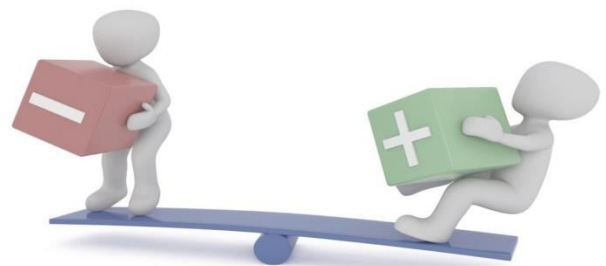

A plethora of opportunities is available for those aspiring to pursue a career in research. Here are some of the popular jobs in research:

- Research Associate
- Historian
- Medical Scientist
- Sociologist
- Computer and Information Research Scientists
- Agricultural and Food Scientist

How do I become a researcher?

The educational qualifications you need to fulfill to become a researcher is a master's degree (research-focused) or Ph.D. in your field of interest. Further, prior work experience as a research associate or working on various research projects is also preferable.

The Pros and Cons of a Career in Research

Travel and relocation-

Pro: Moving around does have its advantages - it is a unique opportunity to travel to new places and experience life in different countries and cultures. One can meet new people and obtain contacts, both of which are extremely rewarding. Furthermore, it offers

the experience of jobs at various institutions, which can give a insight into how cultures vary across universities. Lastly, being part of an institution like a university provides you a pre-existing network to explore, both professionally and socially, which can make settling down in a new country a whole lot easier.

Con: However, arranging international relocations is a lot of work, and it can be hard to make new friends and create a social circle in a new city. Particularly for those with families, relocation may be very demanding - your partner may also need a job in your new city and new schools need to be found for children, which can be a challenge. If your partner is also in research, some institutions offer dual career programs which help to find research positions for both members of a couple. Moreover, relocating can be stressful on the mind, causing some to slip into depression, meaning having adequate support for a move is essential.

Independence and interest

Pro: One great advantage of a career in research is how interesting the work is, and the independence one is afforded. Particularly if you are able to secure third-party funding (that is, funding awarded directly to the researcher as opposed to a university or department), you can organize your own working schedule and priorities, and choose the topics of research which are of most pressing interest to you. Within many research institutions there is the possibility of flexible working hours, which can be especially advantageous to those with young children.

Security and career prospects

Con: One particularly difficult aspect of a research career is in the lack of job security. Postdocs are typically employed on short-term contracts for two years, and at the end of this period they must find another position. For the ambitious and determined researcher, this can be an opportunity for fast career progression and the chance to work in a variety of labs. However, this insecurity can also be a source of stress for many researchers as there is no guarantee of long-term stable employment. Progressing from a postdoctoral position to a professorship can be extremely competitive, and in many countries the

number of professor positions is being reduced due to budget cuts. Overall, many more PhDs and postdocs are working than there are professorships available, so you must be extremely determined to follow this path.

Transferable skills

Pro: Although the competition for academic positions is so fierce that a career in research may seem risky, in fact the skills one acquires in the performance of research can be transferred to many other fields. Aside from the skills of critical thinking which are highly trained in researchers, there are specific skills which can be adapted to other career paths. Researchers may acquire expertise in mathematics or statistics, in written communication, or in poster and oral presentation. All of these skills can be put to use in other jobs, so if a research position is not available, then you still have other career options open to you.

Whether a career in academia is for you or not will depend entirely on your own levels of determination and persistence, along with weighing up the pros against the cons of having to move around a lot, having flexible but unstable work, and where you think it could lead in the future. In the end, only you can make the choice - but keep in mind the various advantages and disadvantages of going down this particular career path.
